

Laboratory Information Management System

Modern laboratory exists in an environment that produces a large amount of data scattered in Hundreds of excel & word files, Over a period of time, this increase of data can cause significant problems to manage it. That's why LQMS stands for...

With more than a decade of experience in automating Laboratory processes in regulated environments, LQMS has developed an integrated QMS enabled LIMS that combines Labs best practices with the flexibility to meet every customer's unique needs.

Our LIMS solution would enable laboratories to move towards a paperless office allows you to effectively manage samples and associated data. where your lab can automate workflows, integrate instruments, and manage samples and associated information. We have experience of working with all types of laboratories, whether you have 10 users or hundreds of users, we have a customized quote to suit your business, no matter what modules or functionality needs.

Best Laboratory Practice Continuously Monitored @ 360°

Unlike other vendors, LQMS is designed, developed and advised by Lab professionals with two decades of experience in the same field.

We are committed, we have learned from our mistakes and our hard earned experiences are reflected in all our work flows.....

Quotations and invoicing

From the basic laboratory level, Automate the enquiry, quotation and billing process to increase efficiency and reduce missed billing, also can easily track billing progress, including work done but not billed yet.

Sample Login (Sample-Based, Client & Project-Based), Bar Coding

The LQMS suite offers very user-friendly and flexible ways to log in samples. You can associate tests/processes/paths to match your work flow.

Workflow & Workload Management

Configure your system to fit the workflow of your laboratory. You can configure virtually everything, from locations/departments,

QA / QC

LQMS supports all QA/QC functions. Users are able to create the formulas that calculate any of their QC results automatically.

Instrument Interfacing

LQMS readily interfaces with any instrument that produces a CSV file. Huge savings in time and elimination of the potential for error in transcription.

Reporting

The crystal reporting tool in LQMS makes generating a report in seconds. You can select exactly which information you would like to see and in what order, and any filtering criteria.

Audit Trails

LQMS provides audit trail capabilities to meet any security or regulatory standards. any modifications made to information are stamped with that user's identification and the system level date and time.. This applies to records, documents, specifications, limits and electronic signatures.

Chemicals, Reagents and Consumables

What's your purchase and where it consumes! You can track each of these items, grouping them according to specific criteria

Timeline...

Making possible the easy and accurate compilation of historical data between the lab and the customer.
